

# Deuterated reference materials for toxicologists - from Abacavir to Zolpidem

Deuterated versions of drugs and their metabolites for use as internal standards are vital tools for laboratories conducting accurate determinations of these materials in biological and environmental matrices. Many authorities, such as the Society of Forensic Toxicology's "Forensic Toxicology Laboratory Guidelines" and the EWDT's "European Laboratory Guidelines for Legally Defensible Workplace Drug Testing", recommend or require the use of deuterated standards.

LGC Standards is committed to supporting our customers by providing the widest possible range of deuterated materials, obtained from a number of specialist suppliers. Many of these materials already feature in our catalogue, and we are continuing to add to our product range, driven primarily by feedback from our customers about their developing needs.

Some examples of deuterated materials currently listed include:
