

LGC Promochem Environmental policy

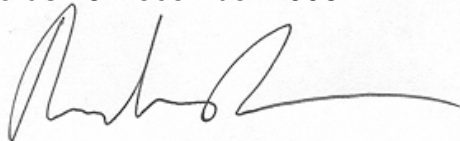

LGC Promochem wishes to be a part of a sustainable society by giving due consideration to environmental issues both in our day to day operations and in our decision making for the future. The following environmental policy will form the foundation of our efforts to ensure that we contribute to a sustainable society, in a way which ensures the longevity of our business and a positive awareness of our brand name. LGC Promochem will perform an annual audit of environmental improvements and set clear goals for the coming year.

Will shall ensure that our operations:

1. Motivate employees to act responsibly in environmental matters. Through education and information, we want to maintain knowledge and interest at a high level, and hence encourage the engagement of all employees.
2. Lower the environmental load from all transport in which we are involved, including business trips and shipments of products.
3. Lower the environmental load from our offices by:
 - Lowering energy consumption and materials used
 - Placing relevant environmental demands when purchasing products and services
 - Ensuring waste is handled in environmentally friendly ways
4. Obey laws and regulations as a minimum level of engagement.

This policy has been produced after a half day training for all staff at Ekocentrum in Gothenburg. Our comprehensive goal is constant improvement in our environmental work to contribute to a sustainable society.

Borås 18 December 2006

Anders Persson

Country Manager
